ATS Intelligence Report

ATS Score: 13%

Match Percentage: 33.33%

Matched Skills

- java
- sql

Missing Skills

- gcp
- machine learning
- python
- rag

AI Recommendation

ATS Analysis Report Explanation and Recommendations The provided ATS (Application Tracking System) analysis report assesses the compatibility of a resume with a specific job posting. The results indicate the degree to which the resume matches the required skills and qualifications for the position. **Key Findings:** 1. **Score:** The ATS score is 13, which is a relatively low score, indicating that the resume may not be highly optimized for the job posting. 2. **Match Percentage:** The match percentage is 33.33%, suggesting that only about one-third of the required skills are present in the resume. 3. **Matched Skills:** The resume has successfully matched two skills: 'java' and 'sql'. This indicates that the candidate has some relevant technical skills. 4. **Missing Skills:** The resume is missing several key skills, including 'gcp', 'machine learning', 'python', and 'rag'. These skills are likely crucial for the position, and their absence may negatively impact the applicant's chances. 5. **Required Skills:** The job posting requires a combination of technical skills, including 'gcp', 'java', 'machine learning', 'python', 'rag', and 'sql'. The resume currently only meets two of these requirements. **Improvement Suggestions:** To increase the match percentage and improve the overall score, it is recommended that the candidate: 1. **Add relevant keywords:** Incorporate the missing skills ('gcp', 'machine learning', 'python', and 'rag') into the resume, especially in the summary, skills section, and work experience. 2. **Emphasize relevant experience:** Highlight any experience or projects that demonstrate proficiency in the required skills, even if they are not explicitly mentioned in the work experience section. 3. **Tailor the resume:** Customize the resume to match the specific job posting, using language and keywords from the job description to increase the match percentage. 4. **Develop missing skills:** Consider taking courses or gaining experience in the missing skills to enhance the candidate's qualifications and competitiveness for the position. 5. **Use a clear and concise format:** Ensure the resume is well-organized, easy to read, and uses a standard font to improve the ATS parsing and matching process. By implementing these suggestions, the candidate can improve the resume's compatibility with the job posting, increasing the chances of passing through the ATS and being reviewed by the hiring manager.
